

DECOMPOSER

Sitala from Decomposer, 16-pad drum sampler, updates to 2.0

June 16, 2023 | info@decomposer.de | decomposer.de

Decomposer has just released their second major version of Sitala, a super easy to use drum sampler. It's one of the most popular drum samplers around, currently listed on KVR as the 5th most popular drum sampler on the market.

It's got **16 pads**, **automatic beat slicing**, and a surprising amount of depth in its 6 controls for tweaking the sounds.

It's particularly popular with Reaper users, and takes advantage of Reaper's plugin extensions for labeled note names and automatic multi-out routing.

This new release adds support for **Apple Silicon**, a **4-by-4 MPC-style layout**, **two new factory kits** (one retro, the other classic hip hop), **dark mode**, **instant missing sample finder** (for those ill-fated sample folder reorganizations), VST 3 support, and a bunch of smaller features.

Sitala's been around for more than 5 years, but this is the biggest update since 2021.

This update costs \$20. Sitala has been free in the past, and the old version still is, but the new release packs a lot of goodies that make it worth the price of admission.

Sitala is available for macOS, Windows and iOS at decomposer.de.
